Skills

SERVER SIDE

PHP, Yii2 (MVC, ActiveRecord, migrations), REST API

DATABASES

MySQL, MS SQL Server. JOIN, indexes, views, transactions

CLIENT SIDE

HTML, CSS, Bootstrap, JavaScript, React

TOOLS

Git and GitHub, Postman, Composer, phpMyAdmin, Figma, Canva

A LITTLE

C# (WinForms), Kotlin (Android), AVR microcontrollers, 1C

Languages

Russian: native

English: basic

Education

Polytechnic College of Urban Economy, Saint Petersburg

2022 – 2026

Information systems and programming, «Web and multimedia application developer»

Ekaterina Sysoeva

BACKEND DEVELOPER, JUNIOR

PHP · Yii2 · MySQL · REST API

I develop the server side in PHP and Yii2. My main professional interest is designing databases, table relations and SQL queries. I completed my diploma project on my own: an online shop for beaded jewellery, from database design to the administrator guide. I also do front-end layout and prepare mockups in Figma. I am looking for a position in a team of experienced developers with room for professional growth.

Projects

Bijouterie.ss, online jewellery shop (diploma) — 2026 · PHP, Yii2, MySQL

- 10 tables with foreign keys and unique indexes, a view for the cart calculation. The structure was changed through Yii migrations.
- An order is created in a single transaction: placing the order, deducting stock, clearing the cart. On an error all changes are rolled back.
- 15% off the first two orders, product promotions, reviews only after purchase and moderation. Stock is checked on the server side.
- Password hashing, CSRF protection, output escaping. For the project I prepared the technical specification, an explanatory note and two guides, and ran 96 test checks.

Perfume API, REST service for a perfume shop — 2025 · PHP, Yii2, MySQL

- Sign-up and sign-in with a Bearer token (valid for 30 days), correct response codes: 201, 401, 409, 422.
- A catalogue with a filter, orders with statuses, reviews, adding products for the admin. The requests are organised in a Postman collection; a technical specification was prepared for the service.

Avto, car rental — PHP, Yii2, MySQL

- Brands, classes, cars, rental requests, user reports. CRUD operations with search and filters in every table.

Pets, lost pets search (React 18): cards, search, personal account. A study project in web application design.

C# and SQL Server apps: hospital registry (patients, departments, wards, procedures), a shop, «Help choosing a gift».

Also: databases for a college, a spare parts warehouse, a library; website layout from Figma mockups.

Work experience

Voice customer support operator, Yandex Eda — Aug – Oct 2026

- Order requests: complaints, refunds, compensation, work with couriers and restaurants. 100–150 requests per shift, CRM and knowledge base. Bonus at the maximum rate.

Administrator, ProPiter dance centre — Oct 2025 – Jul 2026

- Booking clients in 1C, timetable and attendance, payment tables, contracts from templates.

Preparing a classmate for the demo exam (PHP, Yii2) — Mar – May 2026

- Study guides, explaining topics, practice sites in the exam format, checking the work.

Custom presentations, freelance — Nov 2024 – May 2026

- Read the client's material, wrote a short summary and built slides in Figma and PowerPoint.

Earlier — 2021 – 2025

- Order picker at VkusVill (summer 2025): picked orders, handled non-standard customer questions.
- Content manager of a bath bomb shop (2021–2022): Instagram, content plan, photo and video, texts.
