Skills

SERVER SIDE

PHP, Yii2 (MVC, ActiveRecord, migrations), REST API

DATABASES

MySQL, MS SQL Server. JOIN, indexes, views, transactions

CLIENT SIDE

HTML, CSS, Bootstrap, JavaScript, React

TOOLS

Git and GitHub, Postman, Composer, phpMyAdmin, Figma, Canva

A LITTLE

C# (WinForms), Kotlin (Android), AVR microcontrollers, 1C

Languages

Russian: native

English: basic

Education

Polytechnic College of Urban Economy, Saint Petersburg

2022 – 2026

Information systems and programming, «Web and multimedia application developer»

Ekaterina Sysoeva

BACKEND DEVELOPER, JUNIOR

PHP · Yii2 · MySQL · REST API

I write the server side in PHP and Yii2, and what I like most is databases: designing tables and relations, then writing the query that returns exactly what is needed. I built my diploma project on my own: an online shop for beaded jewellery, from the database schema to the administrator guide. I also do front-end layout and design mockups in Figma. I want to work in a team where there is someone to learn from.

Projects

Bijouterie.ss, online jewellery shop (diploma) — 2026 · PHP, Yii2, MySQL

- 10 tables with foreign keys and unique indexes, a view for the cart calculation. The schema evolved through Yii migrations, not by hand in phpMyAdmin.
- An order is placed in a single transaction: the order is created, stock is deducted, the cart is cleared. If anything fails, nothing is left half done.
- 15% off the first two orders, product promotions, reviews only after purchase and moderation. Stock is checked on the server, not only on the button.
- Hashed passwords, CSRF protection, output escaping. For the project I wrote the technical specification, an explanatory note and two guides, and ran 96 test checks.

Perfume API, REST service for a perfume shop — 2025 · PHP, Yii2, MySQL

- Sign-up and sign-in with a Bearer token (lives 30 days), proper response codes: 201, 401, 409, 422.
- A catalogue with a filter, orders with statuses, reviews, adding products for the admin. I collected the requests in Postman and wrote the technical specification for the service.

Avto, car rental — PHP, Yii2, MySQL

- Brands, classes, cars, rental requests, user reports. Plain CRUD, but with search and filters in every table.

Pets, lost pets search (React 18): cards, search, personal account. A study project on designing web applications.

C# and SQL Server apps: hospital registry (patients, departments, wards, procedures), a shop, «Help choosing a gift».

Also: databases for a college, a spare parts warehouse, a library; website layout from Figma mockups.

Work experience

Voice customer support operator, Yandex Eda — Aug – Oct 2026

- Order requests: complaints, refunds, compensation, work with couriers and restaurants. 100–150 requests per shift, CRM and knowledge base. Bonus at the maximum rate.

Administrator, ProPiter dance centre — Oct 2025 – Jul 2026

- Booking clients in 1C, timetable and attendance, payment tables, contracts from templates.

Preparing a classmate for the demo exam (PHP, Yii2) — Mar – May 2026

- Study guides, explaining topics, practice sites in the exam format, checking the work.

Custom presentations, freelance — Nov 2024 – May 2026

- Read the client's material, wrote a short summary and built slides in Figma and PowerPoint.

Earlier — 2021 – 2025

- Order picker at VkusVill (summer 2025): picked orders, handled non-standard customer questions.
- Content manager of a bath bomb shop (2021–2022): Instagram, content plan, photo and video, texts.
